

Okotherm® CIC Fire Resistant Cable

600V Control Cable—Type MC-HL C-L-X, Aluminum Sheath
Multiple Nickel Coated Copper Conductors, 90°C Wet or Dry Rating
For Cable Tray Use - Sunlight Resistant - For Direct Burial

- A** Nickel Coated Copper Conductors
- B** Okotherm (Silicone) Thermoset Insulation
- C** Nickel Coated Ground Conductor
- D** Fiberglass Braid - Coded per ICEA
- E** Glass Fillers
- F** Cable Tape
- G** Impervious, Continuous, Corrugated, Aluminum C-L-X Sheath
- H** Black Okoseal Jacket

Cable Description

Nickel coated copper conductors, Okotherm CIC fire resistant thermoset silicone insulation, with FR tape if required, color or number coded fiber glass braid, cabled conductors, nickel coated ground conductor (same size as control conductor), cable tape, aluminum CLX sheath, Okoseal (PVC) jacket.

Conductors: Nickel Coated Copper

Insulation: Okotherm Thermoset Silicone, with FR tape if required

Color Code: ICEA S-73-532, Method 3 or 4

Ground: Nickel coated copper, same size as insulated conductors

Braid: Fiber Glass Braid

Armor-CLX: Continuously Welded and Corrugated Aluminum

Outer Jacket: Black PVC

Applicable Industry Standards:

— UL 1569, 1309, 2225 — ICEA S-73-532 (NEMA WC 57) — ICEA S-95-658 (NEMA WC 70) — ASTM B-355

Flame Tests:

IEC 60331, ICEA T-29-520, IEEE 1202

Applications

Okotherm CIC 600 volt control cables are used in systems where, in the event of a fire, circuit integrity is required in order to maintain a process or to safely shut down the process. Fire resistance is determined by compliance to the IEC 60331 circuit integrity fire test. Okotherm CIC cables maintain circuit integrity based on qualification to the IEC standard 60331 for all temperatures and times up to and including 2000°F for three hours. When exposed to a fire, the Okotherm CIC insulation becomes an electrically insulating ceramic-like ash that is capable of maintaining the operating voltage.

Okotherm CIC CLX Type MC-HL cables with the impervious, continuous aluminum corrugated sheath are recommended as an alternative to a wire conduit system. These cables may be installed indoors or outdoors, in wet or dry locations, as open runs of cable secured to supports not more than six feet apart, in cable tray, as an aerial cable on a messenger, in any approved raceway, direct burial, or encased in concrete. They are also approved for use in Class I & II, Division 1 and 2, Class III, Division 1 and 2 and Class I, Zones 1 and 2 hazardous locations per NEC Articles 501, 502, 503, and 505.

Okotherm CIC CLX Type MC-HL control cables are authorized for use on services, feeders and branch circuits for power, lighting, control and signaling circuits in accordance with NEC articles 330 and 725.

Product Features

- UL Listed as Type MC-HL E38916 and Marine Shipboard Cable E137931.
- UL Listed for cable tray use, direct burial (2/C 14 AWG and larger) and sunlight resistant.
- Passes the IEEE 383-1974 and IEEE 1202-1991 vertical tray flame tests.
- Passes the 210,000 BTU ICEA T-29-520 Vertical Tray Flame Test.
- Complete pre-packaged, factory-tested wiring system — color coded.
- C-L-X cables are quality control inspected to meet or exceed applicable UL standards.
- 90°C continuous operating temperature in all types of installations.
- 130°C emergency rating.
- 250°C short circuit rating.
- Good EMI shielding characteristics.
- Impervious, continuous metallic sheath excludes moisture, gases and liquids.
- Lower installed system cost than conduit or EMT systems.
- Provides excellent grounding safety.
- In addition, the aluminum CLX sheath exceeds the equipment grounding requirements of NEC Section 250.118 and 250.122, and can be used as the equipment grounding conductor in non-HL areas.
- Excellent compression and impact resistance.
- Continuous long lengths.
- Minimum installation temperature of -40°C or °F.
- American Bureau of Shipping (ABS) listed as CWCMC Type MC-HL.
- Fire Resistant - qualified to 2000°F for 3 hours per IEC 60331.
- Optional LSZH jacket available.

NOTE: All cables include one nickel coated ground conductor that is the same size as the control conductors.

Okonite's web site, www.okonite.com contains the most up to date information.

[†] **Cross-sectional** area for calculation of cable tray fill in accordance with NEC Section 392.22.

(1) Ampacities

Ampacities are based on 310.15(B)(16) of the National Electrical Code for conductors rated 90°C, in a multi-conductor cable, at an ambient temperature of 30°C (86°F). The 75°C column is provided for additional information.

The ampacities shown apply to open runs of cable, installation in any approved raceway, direct burial in the earth, or as aerial cable on a messenger. Derating for more than three current

carrying conductors within the cable is in accordance with NEC Section 310.15(B)(3)(a).

The ampacities shown also apply to cables installed in cable tray in accordance with NEC Section 392.80.
